been redesigned to use space more intelligently; as a result, you will spend less time scrolling and more time getting your work done. Automatic grouping of your messages helps you find and go to e-mail messages anywhere in the list more quickly than before; you can even move or delete all messages in a group at once!

Junk E-mail Filter - The new Junk E-mail Filter helps prevent much of the unwanted e-mail that you receive every day. It uses state-of-the-art technology developed by Microsoft Research to evaluate whether a message should be treated as junk e-mail based on several factors, such as the time it was sent and the content of the message. The filter does not single out any particular sender or type of e-mail; it is based on the content of the message in general and uses advanced analysis of the structure of the message to determine the probability that it is junk e-mail. Any message that is caught by the filter is moved to your Junk E-mail folder, where it can be retrieved or reviewed at a later time. You can add e-mail addresses to your Safe Senders List to ensure that messages from these senders will never be treated as junk e-mail and block messages from certain e-mail addresses or domain names by adding the sender to your Blocked Senders List.

Navigation Pane - The Navigation Pane is more than a simple list of folders: It combines the main navigation and sharing features of Outlook into one, easy-to-use place. In Mail, you will see more mail folders than before and you can add your favorite folders to the top
